

Quark 6 PDF Export Settings

Before You Start: It is imperative that all Quark documents be closed while setting up the PDF export settings or the settings will only be applied to the document that is open.

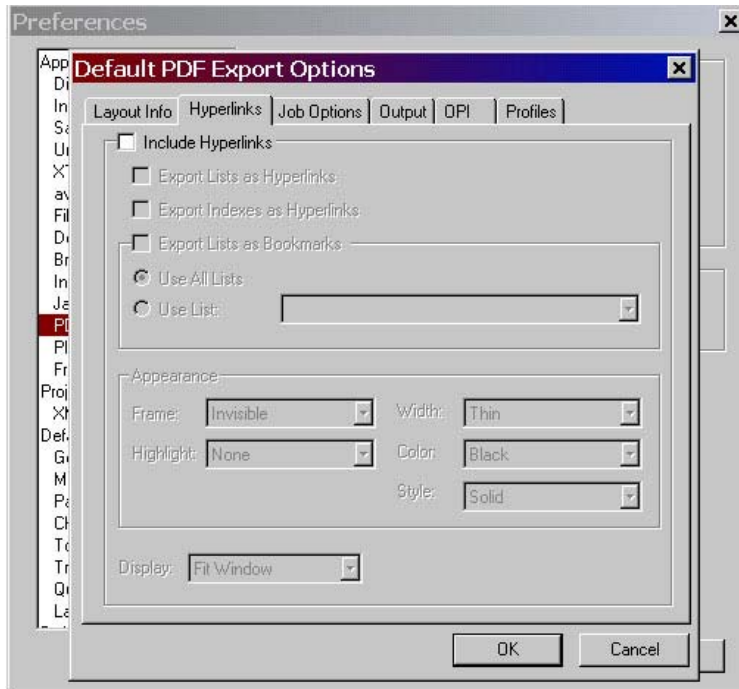

Step One: Open your Quark Preferences window.

Choose PDF and select the default settings options button.

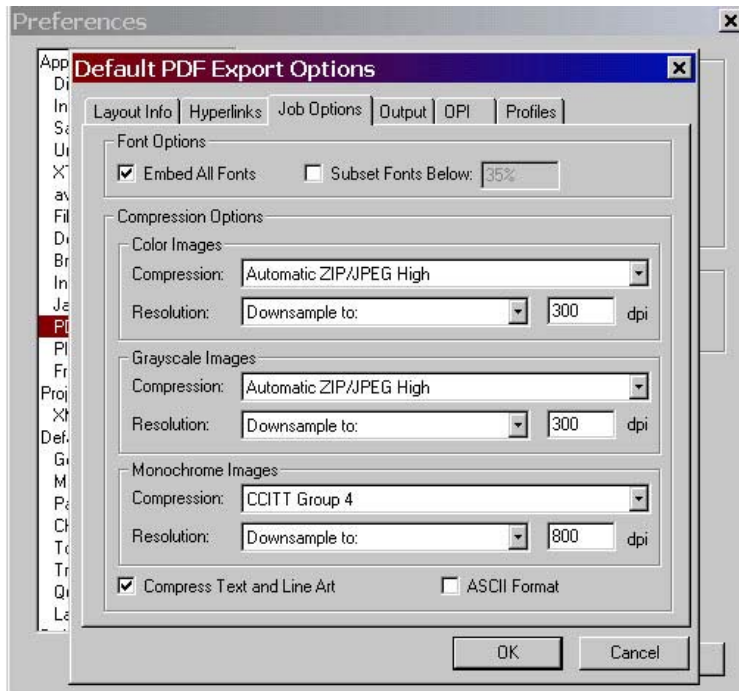

Step Two: Select the Hyperlinks tab.

After you select the default settings options button you will see this window below. The layout info tab is not used so select the hyperlinks tab and deselect everything as indicated below.

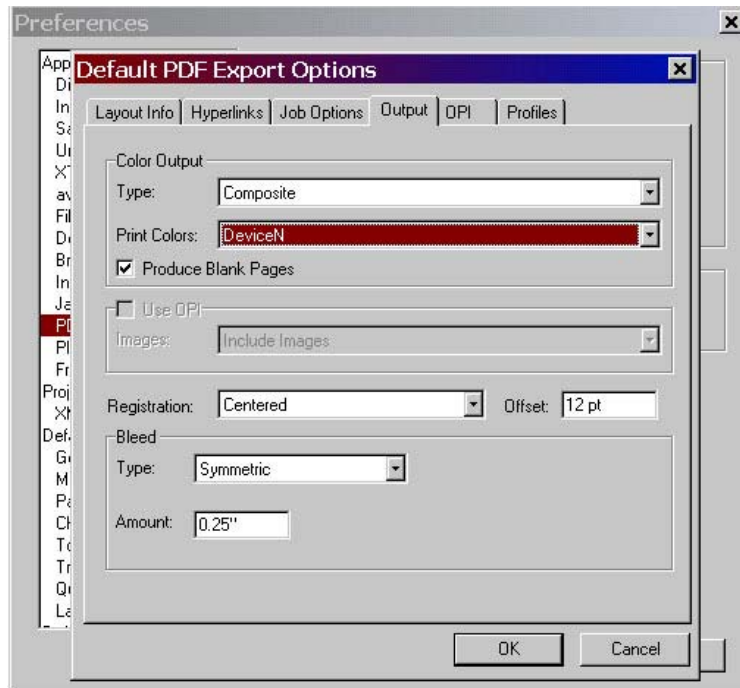

Step Three: Select the Job Options tab.

Set up the job options tab as indicated below.

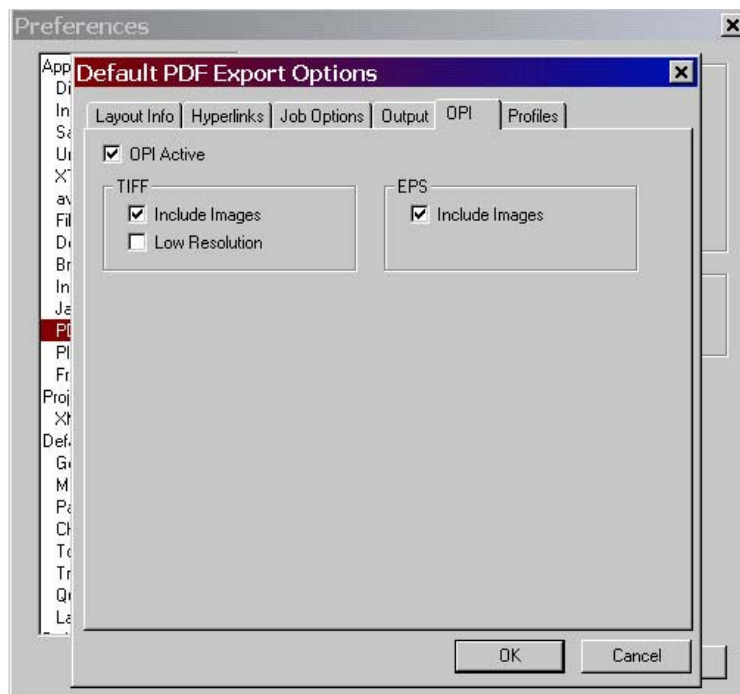

Step Four: Select the Output tab.

Set up the output tab as indicated below.

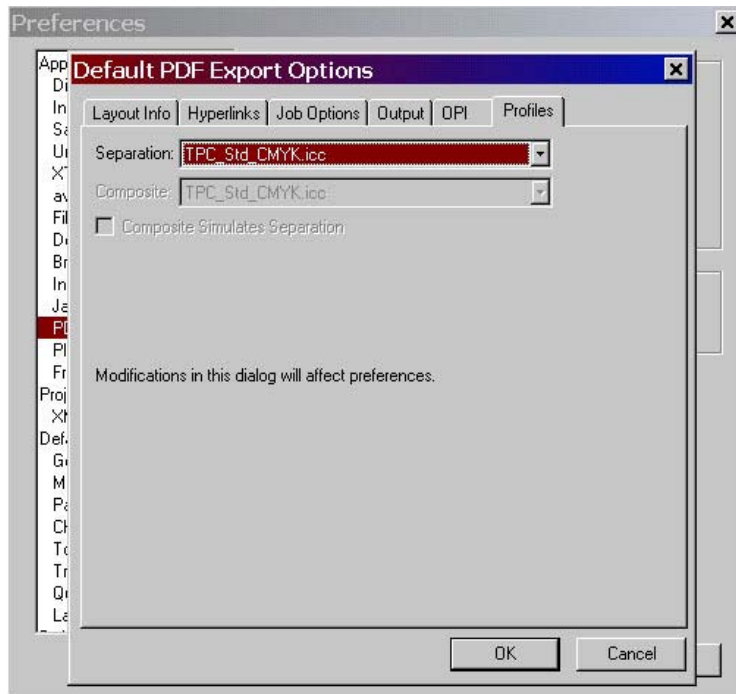

Step Five: Select the OPI tab.

Set up the OPI tab as indicated below.

Step Six: Select the Profiles tab.

Set up the profiles tab as indicated below.

Your PDF export defaults are now set up correctly.
